# Build-up Your Security

Proactive Video Monitoring  
for Construction Sites

# You can't protect your construction site all the time, but we can...

Keep every site under construction under constant surveillance

## Securing Construction Sites with PVM

Construction sites typically attract attention from a wide variety of people, some are simply curious on-lookers, some potential vendors or even job candidates and some with bad intentions. It's the bad guys you need to be most interested in identifying before they inflict damages or expose you to unexpected liabilities.

Vandalism is common at construction sites – often from mischievous kids who scare easily, especially if they know they are being watched. Even if there is no premeditated intent to commit a crime, trespassers can cause costly damage to structures and gear, or even worse, they may become injured creating civil liabilities.

Criminals pose a much more significant threat as their actions are typically planned in advance. Expensive construction equipment, tools and building materials are prime targets for theft and all but impossible to trace once they leave your premises.

These risks and more can initiate millions of dollars in losses, even with insurance. And your claims can cause insurance premiums to skyrocket higher than they already are. Not to mention costly impact and the ripple effect of having to interrupt construction workflows while repairs are made or building supplies and equipment are replaced.

Property owners and construction companies alike need a proactive solution to ensure their sites are secure and protected against potential threats and liabilities.

## Why Netwatch Proactive Video Monitoring?

24/7 Video Monitoring

Augment Guard Services

Liability Protection

Audio/Visual Deterrents

Video surveillance only records events as they happen. By the time you become aware of an intrusion or crime, the damage is already done. Netwatch Proactive Video Monitoring provides peace of mind knowing construction sites, no matter how large or remote, are safe and secure.

If the perimeter of a construction site is breached, an intervention specialist at one of our US-based monitoring centers will address intruders with a live audio warning. This live, real-time audio intervention has demonstrated a 98% efficacy rate in deterring crimes. Our software ensures that verified threats are transmitted within seconds to our state-of-the-art monitoring centers, allowing our intervention specialists to intervene before any crime is committed.

**Netwatch Proactive Video Monitoring has prevented over 125,000 crimes to date and is aligned to the unique requirements of construction security. Our video surveillance system provides 24/7 protection, preventing crimes before they occur.**

Bennett Construction have been powered by Netwatch for many years now. They supply us with monitored CCTV security on our various construction sites and compounds. All in all, I can't speak highly enough of their continued service and the staff that they employ, and no job is ever too big or too small. We have peace of mind that our sites are being monitored in a professional, secure and cost effective manner. When comparing to manned guards, who quite simply can't be everywhere at the once, proactive monitored cameras are monitoring and recording entire sites 24/7."
